

Simplifying Care Transition

Remote Care Management. Evolved.™

VivifyHealth®

The Challenge

The transition from one care setting to the next is a vulnerable time for any patient. The care patients receive after a hospital stay is often fragmented. Care plans can be conflicting; services, duplicated; and medications, unreconciled.

The result? Higher-cost, lower-quality care—and sicker patients who often land back in the hospital in less than a month.

TRANSITIONING
PATIENTS BETWEEN
HEALTHCARE SETTINGS
CAN YIELD GAPS IN
CARE, COMPROMISING
SAFETY, QUALITY, AND
CLINICAL OUTCOMES.

The Solution

Patient lifecycle and daily engagement technology that improves care transitions by:

- ✓ Digitally passing discharged patients into remote monitoring triage and workflow, using integrated orders coming from the electronic medical record.
- ✓ Combining monitoring and appropriate escalation protocols to ensure care continuity and earlier interventions for patients in decompensation episodes.

The Value

A robust and extensible platform, integrating multiple engagement and remote care programs for optimum patient care management.

- ✓ Streamline the patient experience of the post-acute care plan, conveying clear care instructions and needed follow-up activities, while giving patients, primary care physicians, and specialty providers ready access to the patient's well being at all times.
- ✓ Mitigate financial risk for the healthcare organization while generating improved clinical outcomes for “win-win” provider and patient alignment.

The Value

The Vivify Pathways platform delivers more Post-Acute Care value:

- ✓ Gain efficiencies in clinician workflow by reducing phone calls and in-home visits.
- ✓ Avoid preventable hospitalization expenses and/or readmission penalties.
- ✓ Regular virtual visits help care teams identify and fix social health and safety issues.
- ✓ Reduce length of stay with provider confidence.
- ✓ Engage and educate patients and families to ensure compliance with care pathways.

Care Pathways for Every Patient

Vivify Pathways provides over 70 default condition pathways out-of-the-box and enables you to create your own.
